

# Winterwarm Boxer+

The Winterwarm Boxer+ is a direct gas-fired air heater for heating poultry houses or emergency heating for inside and outside

## Reliable performance

The Winterwarm Boxer+ is built for the agricultural market, delivering reliable heating when it matters most. It's hot surface ignition ensures good start up every time. Of course several safety functions are integrated like ionisation flame detection, burner ignition and gas valve control. The operation of the centrifugal fan gets checked by a flow switch which is positioned in the warm air outlet. In fact every component has been designed for maximum reliability.

## Simple service

Today's farmers need to reduce turn round times between crops to a minimum. The Boxer+ can be installed outside the house to avoid disruption during cleaning and is designed to ensure that routine service is simple and economical.

## Your benefits at a glance:

- ✓ Simple heating solution
- ✓ Integrated safety functions
- ✓ Suitable for propane and natural gas
- ✓ Low maintenance
- ✓ Outside installation possible
- ✓ Ionisation flame detection
- ✓ Burner ignition control
- ✓ Gas valve control
- ✓ Maximum reliability
- ✓ Available capacity: 80 kW

## Robust construction

The external casing of the Boxer+ consists of removable panels in prepainted steel of such a quality that the Boxer+ is suitable for both indoor and outdoor installation. It has been designed to operate reliably, whatever the weather. When installed inside, the heater can be suspended on chains (hoisting eyebolts are provided on top of the heater) or be placed on supporting brackets.

## Energy efficient

The Boxer+ will give you efficient combustion so that your energy costs can be kept to a minimum. Its powerful fan will ensure good temperature distribution and can even be set to provide constant air movement, even when heat is not required. If you install the air recycling duct, fresh air, either heated or not, can then be brought into the building to improve the inside climate (outside installation only). Optionally the Boxer+ can use all outside air, all inside air or a mixture. A shutter in the duct of the fresh air inlet determines the % of fresh air inlet.
